HOW WOULD YOU RATE THE PERFORMANCE OF THIS ACTOR IN PROVIDING SECURITY?

Only

10%
expect their security situation to improve in the next year

WHAT ARE THE MOST SIGNIFICANT CHANGES NEEDED TO BRING LASTING PEACE TO SOUTH SUDAN?

Human Security Survey South Sudan

Payinjiar (Unity State) — October 2020

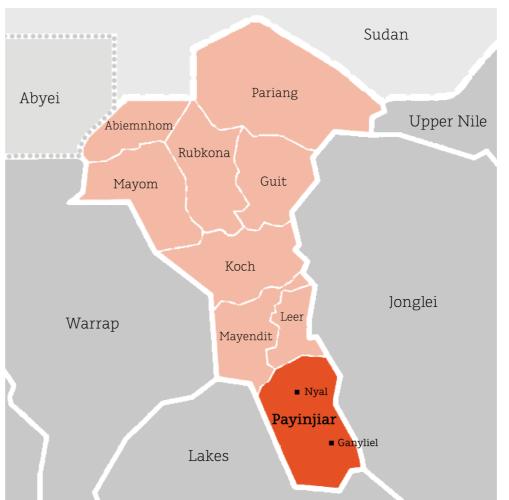

The **Human Security Survey (HSS)** is a methodology developed by PAX to collect data and facilitate dialogue about civilians' experiences and perceptions in situations of conflict. The purpose is to increase the understanding of local security dynamics and trends; enhance the 'claim-making capacity' of civilians to identify their priorities and hold security providers and decision-makers accountable; and enable international stakeholders to design and implement protection activities that reflect local priorities and experiences using evidence-based advocacy.

Human Security Survey: South Sudan

The continued drove the earlier drive interest and the following the section of the

Over the span of 3 weeks, **10** enumerators conducted **450** face-to-face interviews in Payinjiar, using a standardized survey instrument and script. One selection criterium of enumerators was English proficiency, as they were responsible for forward-backward translation of the English questionnaire to the local Nuer language during the interviews. Other criteria related to the diversity of the team, as well as technical and ethical competencies. Additionally, in response to the **COVID-19 pandemic**, several measures were taken to minimize the risk of infection during the enumerator training and data collection, such as the use of face masks, regular hand disinfection, no hand shaking, and maintaining 2 meters distance at all times.

In February 2020, the ten states system of governance was

reinstituted in South Sudan, in which Unity State consists of 9 counties. In Payinjiar County, the enumerators surveyed 7 payams in **Greater Ganyliel Area** (Ganyliel, Pachar, Pachienjiok, Pariel, Thornuom, Tiap, Yai) and 5 payams in **Greater Nyal Area** (Katith, Kol, Mayom, Nyal, Nyandong). These areas were selected in cooperation with local partners and the enumerators on the basis of physical security and geographical access. Within the payams, households and individual respondents were selected using an approximately random procedure to allow for some generalizability of the HSS results.

PAX will return to Payinjiar for a data presentation and community dialogue meeting to formulate an action plan to improve the local security situation.

80%

Respondents finding it important for civilians to meet with local government and organized forces to advocate for better protection in their community
